

MOHAMED TAREK ABDELAZIZ

DevOps Engineer | Linux & Systems Administrator | Cloud Infrastructure Specialist
Cairo, Egypt | +201020559935 | muhamedtarek238@gmail.com | [linkedin.com/in/muhammed-tarek-s238](https://www.linkedin.com/in/muhammed-tarek-s238) | [http://github.com/mohamedtarek238](https://github.com/mohamedtarek238)

PROFESSIONAL SUMMARY

DevOps and Systems Engineer with hands-on experience in Linux administration, Kubernetes, CI/CD automation, and infrastructure management. Skilled in deploying and maintaining scalable environments using Terraform, Ansible, Docker, and cloud platforms. Experienced in implementing monitoring and observability solutions with Prometheus and Grafana to ensure system reliability, performance, and operational efficiency

CORE COMPETENCIES

Cloud Platforms	AWS (EC2, RDS, S3, VPC, IAM) Azure Oracle Cloud (OCI) Huawei Cloud
Containerization	Docker Kubernetes (K8s) Helm Persistent Volumes Container Security
IaC & Config Mgmt	Terraform Ansible YAML JSON
CI/CD & DevOps	Jenkins GitHub Actions Git GitOps Workflows
Observability	Prometheus Grafana Loki Jaeger Zipkin OpenTelemetry
Security	DevSecOps SonarQube Trivy IAM Vulnerability Scanning
OS & Virtualization	Linux (Ubuntu, RHEL, CentOS) Windows Server VMware vSphere
Scripting	Bash Python JavaScript Node.js PHP C++
Databases	MySQL PostgreSQL MongoDB AWS RDS
Networking	TCP/IP DNS Load Balancing VPN Firewall Troubleshooting

PROFESSIONAL EXPERIENCE

Integrated Solutions for Ports (ISFP)

Linux Administrator / DevOps Engineer | December 2025 – Present | Alexandria, Egypt

- Architected and deployed production-grade Kubernetes infrastructure supporting containerized services for mission-critical applications, ensuring high availability and reliable system performance.
- Administered Linux servers across multiple environments, implementing automated user management, network configuration, and security hardening to enhance operational efficiency and security.
- Automated CI/CD pipelines using Jenkins and GitHub Actions, streamlining deployment workflows and enabling faster, more reliable software releases with minimal downtime.
- Implemented a comprehensive monitoring and observability stack using Prometheus and Grafana to improve system visibility, performance monitoring, and proactive issue detection.
- Optimized infrastructure resource utilization through capacity planning and auto-scaling policies, improving operational efficiency while maintaining application performance and reliability.

Egyptian Armed Forces

Software Engineer & System Administrator | September 2025 – December 2025 | Egypt

- Designed and deployed secure Windows Server-based network infrastructure, implementing Active Directory, Group Policy, and Role-Based Access Control (RBAC) to ensure secure and efficient system administration.
- Developed and deployed a full-stack MERN application for personnel and resource management, streamlining operations and reducing manual administrative workload through process automation.
- Configured high-availability infrastructure with load balancing and failover mechanisms to maintain service continuity and system reliability for mission-critical operations.
- Established backup and disaster recovery procedures to enhance business continuity, improve system resilience, and accelerate recovery from service disruptions.

Be School

Part-Time Programming Instructor | February 2024 – December 2025 | Egypt

- Delivered full-stack development training covering PHP, Laravel, MERN Stack, and C++, helping students build strong programming foundations and practical software development skills.
- Mentored students through hands-on projects with a focus on Git workflows, clean code principles, problem-solving, and collaborative development practices, enhancing code quality and industry readiness.

EDUCATION

Bachelor of Science in Computer Science & Information Technology

Damanhur University | Damanhur, Egypt | September 2019 – July 2025 | GPA: Excellent

Graduation Project: Health Care & Diet System — led cross-functional team of 5 to build ML-powered health management platform (Node.js, React, MongoDB, Python) with personalized diet recommendations. Achieved Excellent grade.

CERTIFICATIONS

[Red Hat Certified System Administrator \(RHCSA\) — Red Hat, 2025](#)

[AWS Certified Cloud Practitioner \(CLF-C02\) — Amazon, 2026](#)

[Huawei Cloud Certified Developer Associate \(HCCDA\) — Huawei, 2025](#)

[Oracle Cloud Infrastructure Foundations Associate — Oracle, 2025](#)

KEY PROJECTS

Enterprise Kubernetes Infrastructure & Observability Platform

Kubernetes, Prometheus, Grafana, Loki, Jaeger, Zipkin, OpenTelemetry, Kafka, Keycloak, MinIO

- Deployed production-grade containerized infrastructure on Kubernetes supporting 30+ microservices including Kafka message brokers, Keycloak identity management, and MinIO object storage
- Implemented end-to-end observability combining metrics (Prometheus), logging (Loki), and distributed tracing (Jaeger, Zipkin, OpenTelemetry) providing 360-degree system visibility
- Designed high-availability architecture with automated failover, reducing service recovery time from 15 minutes to 30 seconds

AI-Powered RAG Assistant with Cloud Infrastructure

FastAPI, FAISS, Ollama, RunPod, AWS RDS, Terraform, MySQL, GPU Computing

- Architected complete Retrieval-Augmented Generation (RAG) system using FastAPI, FAISS for vector similarity search, and Ollama for LLM inference; provisioned GPU-accelerated infrastructure on RunPod reducing model inference latency by 70%
- Automated AWS RDS (MySQL) database provisioning using Terraform, implementing infrastructure-as-code best practices for fully reproducible deployments

Three-Tier DevSecOps CI/CD Pipeline

Jenkins, Docker, Kubernetes, SonarQube, Trivy, Git, YAML

- Built secure end-to-end CI/CD pipeline for three-tier web application using Jenkins, reducing release cycle from 2 weeks to 2 days; integrated SonarQube improving code coverage from 45% to 85%
- Implemented Trivy container vulnerability scanning, identifying and remediating 100% of critical CVEs pre-production; configured rolling update and blue-green Kubernetes deployment strategies for zero-downtime releases

PROFESSIONAL TRAINING

System Administration Intensive Program

Information Technology Institute (ITI) Code Camp | July 2025 – December 2025

6-month intensive program covering Docker/Kubernetes, Terraform, Ansible, AWS/Azure cloud administration, Grafana/Prometheus observability stack, and CI/CD pipeline automation with GitHub Actions and Jenkins.
